

Flush doors

Facade & Garage doors

100% MADE IN GERMANY

 **BeluTec**
DOOR & FACADE SYSTEMS

Flush Sectional door covered with aluminum composite

Flush garage doors by BeluTec

Unique, exclusive and invisible

Garage doors, that are invisible from the outside do have a high claim for integration in the facade. The flush garage doors by BeluTec provide the best freedom for the planning.

Consulting, planning & installation - complete service from one source!

You receive our flush gates in your individual design.

Choose between different types of cladding such as aluminum cassettes, flat sheet or slat design. There are also no limits to the color scheme - whether powder coating in RAL colors or special custom shades.

Of course, we can also work with on-site cladding with individual weights and dimensions during the planning stage.

Covering is mounted invisible

Flush Garage door, 7,7 meter covered with aluminium

Flush-fitting doors with wooden covering

individually, exactly to your wishes

- maximum design and design freedom
- integrated ventilation function
- flush installation in the facade with individually realizable surface requirements
- high-quality frame-rung substructure
- individual covering allows complete integration into the facade

Architectural house, flush door with wooden covering

Homogeneous facade in closed condition

Invisible wood covering without visible screwing of the individual slats

Flush garagedoor for two cars covered with wood of larch tree

The facade-flush and flush-fitting doors from BeluTec allow absolute freedom in the individual design of your garage door. Whether wood, aluminum cassettes or Trespa - your imagination knows no bounds.

As you can see in the pictures, the covering can be mounted invisibly from the outside, so that no screws or similar are visible. The facade cladding with wood is currently in great demand. Our frame rungs substructures can be clad with any conceivable wood, so your creativity can be running.

BeluTec offers you the opportunity to have your flush-mounted garage door, as well as the rest of the facade, be covered on-site by your facade builder. The pictures of our projects shown here show how beautifully the garage door can be integrated into the facade. When closed, the door in the facade can only be guessed at and does not disrupt the uniform design.

We are happy to plan individually with you your new garage door. We set no limits to your imagination and gladly implement extraordinary and exclusive wishes!

Your advantages with BeluTec doors Standard or individual

- **ENERGY SAVING POTENTIAL**
Thermal insulation due to special profiles and insulating fillings
- **VENTILATE SPACE WITHOUT OPENING THE GATE**
Top section tilts automatically
- **OPTIMAL USE OF SPACE**
Maximum clearance height and width
- **QUIET DOOR OPERATION**
Never the less very high opening speed
- **LARGE GATES**
Over 10m width and particularly high planking weight as with glass
- **COMPLETE PERFORMANCE**
From consulting and planning to realization and maintenance everything from one source
- **100% MADE IN GERMANY**

Side-Sectional door private house, smooth panels

Sectional doors in various designs

For industrial or private buildings

Sectional doors are suitable for both private buildings and industrial buildings. Due to the different possibilities of the covering, these doors can be adapted to almost any facade. Through flush mounting, these doors can also merge completely with the facade. Various installation variants of our sectional doors allow use even with a small side space or fall. Above is a Side-Sectional door shown, which stands out already by the lateral opening mechanism of other goals. The surface is kept smooth in lamello.

In the project, which is shown below, BeluTec supplied an approx. 5000 x 2200 mm large sectional sectional door. The door consists of an aluminum frame rungs construction with foamed steel sandwich panels. The door leaf is divided into three sections in width and four sections in height. It was prepared for the inclusion of an on-site planking of 10 mm Trespa and 20 mm lathing. The top section of the flush sectional sectional door was designed as a tilting wing for ventilation.

Door leaf visually adapted to the rest of the design

Homogeneous facade in closed condition

Flush standard doors and individual planning for you

Multi-Comfort-Drive

The drive for the special needs!

You can get our flush-mounted doors with different drives. For special needs we offer the MKA (multi-comfort drive). This is characterized by the safety aspect of the emergency hand chain for possible power outages and the closing edge safety device. The drive rail is made of aluminum and equipped with a noiseless and maintenance-free toothed belt.

Furthermore, the carriage has quadruple ball bearing and polyamide sheathed rollers, which support a very quiet running. With the MKA you get a frequency converter including safety and radio package. This includes both a light barrier, as well as a closing edge security whereby a maximum clearance height can be achieved.

For maximum flexibility, the drive head can be mounted on different sides and positions.
